The University of Colorado Board of Regents began holding on-campus forums this week to hear from faculty, staff and students about the qualities they want in CU's next president, continuing efforts to solicit input from stakeholders about the search.

The first two forums were at UCCS and CU Boulder on Monday and Tuesday, respectively, to hear from the university community. The slate of open forums for the university community resumes today with system administration via Zoom and concludes next Wednesday in person and livestreamed with CU Denver and the CU Anschutz Medical Campus (see the schedule here).

The forums are part of the regents’ efforts to meet with many different and diverse groups that have a stake in a successful presidential search. This includes hosting public meetings with traditional campus stakeholders – students, faculty, staff, parents, donors, friends and supporters of the university – as well as external groups that represent the range of diversity in our state.

“I know this is a really important decision and it affects all of you, all of us and our state,” said Regent Lesley Smith, who is chairing the search committee, at Tuesday’s forum at CU Boulder. “I appreciate your input.”

Smith told audience members at the forums that the regents are committed to a transparent and inclusive process, emphasizing input from university stakeholders. She said there will be a special meeting of the Board of Regents on Nov. 18, where regents will choose members of the search committee.

Smith said regents will work with a soon-to-be-announced search firm to finalize a formal job description in December, which also is when the search committee will first meet. She expects the search firm to begin recruiting candidates in January.

At the forums, the board heard from many members of the community who offered comments on a range of topics. Several comments and questions reflected a desire for a diverse pool of candidates, a commitment to equity and the importance of a transparent search process.

Comments also focused on wanting candidates who understood Colorado and a desire for a president capable of working toward increased state funding for CU and higher education across the state.

Smith and Regent Ilana Spiegel appeared at the Monday forum at UCCSS. They were joined Tuesday at CU Boulder’s forum by Board Chair Jack Kroll and Regent Callie Rennison.

“This is among the board’s highest responsibilities, and we are committed to finding the best candidate,” Kroll said. “The board is looking for a thought leader and champion for higher education who can advance the university and Colorado.”

Smith said CU’s presidential search is taking place while about a dozen major public universities across the country also are seeking presidents.

“It’s going to be competitive,” Smith said. “But … the University of Colorado is very strong because of its research, its location, and even though funding is poor, such a high level of expertise in research, medicine and so forth.”

Participants at both forums asked whether the board expects to name a sole finalist or multiple finalists for president; Smith said the decision has yet to be made. She said she has heard good arguments on each side of this debate and that the board will consider all factors before coming to a decision.

Beginning with August’s Faculty Council meeting, members of the Board of Regents have collected input and shared
their perspectives on the presidential search with governance groups across the system, including faculty assemblies, staff councils and student governments. More meetings are scheduled through December; [click here for more information][3].

Regents also have sought input on CU’s next president from many community leaders and stakeholder groups across Colorado, including underrepresented minority groups, members of the Southern Ute Indian Tribe, state lawmakers and the business community. Cortez, Durango, Fort Morgan, Pueblo and Sterling are among the locations regents have visited so far, with a Grand Junction trip yet to come.

Smith on Monday stressed that members of the university community still have multiple channels for providing input during the search process.

Regents encouraged stakeholders who would like to share their thoughts and ask questions to reach out to individual regents at their website[4] or fill out the form at the [Presidential Search][5] website.

New class of CU Distinguished Professors: leaders in research, education, service[6]

The University of Colorado today added 11 new members to its roster of Distinguished Professors, a title signifying the highest honor awarded to faculty across the CU system’s four campuses.

CU Distinguished Professors are tenured faculty members who demonstrate exemplary performance in research or creative work; a record of excellence in promoting learning and student attainment of knowledge and skills; and outstanding service to the profession, the university and its affiliates.

The CU Board of Regents today voted to approve the cohort of faculty members, recommended by President Todd Saliman with the concurrence of the systemwide Committee of Distinguished Professors. This year’s honorees will be formally recognized during a board meeting in spring 2022.

Including this year’s honorees, [129 Distinguished Professors][7] have been named since inception of the title in 1977.

Distinguished Professors for 2021 are:

**Andreas Becker, Ph.D.,** Physics and JILA, CU Boulder.

Becker is world-renowned in researching atomic and molecular dynamics. His particular focus is light-matter interactions. He explores fundamental interactions of atomic and molecular systems with ultrashort intense light pulses, as well as how these interactions can be productively controlled. A faculty member since 2008, he has authored or co-authored over 120 articles and has been cited over 10,000 times. He has received continuous support from the Department of Energy since his arrival in the U.S., as well as substantial support from the U.S. Air Force. Beyond his pioneering work as a theoretical researcher, Becker is one of the best and most versatile physics professors at the University of Colorado. He is highly regarded and has been named a “Favorite Professor” by the Physics Honor Society four times. Becker has been both a leader in the Department of Physics and at JILA, and is a highly successful graduate student mentor over the last decade.

**Dana Dabelea, M.D., Ph.D.,** Epidemiology, CU Anschutz Medical Campus.

A member of the CU faculty since 2001 and founder of the Lifecourse Epidemiology of Adiposity and Diabetes (LEAD) Center in 2015, Dabelea’s work has focused on applying a lifecourse approach to studies of diabetes in youth, which has increased substantially in recent decades. Her research design and approach has attracted numerous colleagues and trainees from multiple disciplines, embodying “team science.” She has helped place CU and the CU Anschutz
Medical Campus at the forefront of diabetes studies. A leader in her field, Dabelea has authored over 368 original publications and an important book in pediatric diabetes epidemiology; has been cited over 20,000 times; and has a Research Gate index of 49.20, placing her in the top 2.5% of all biomedical researchers. Dabelea served for almost 20 years as co-chair of the SEARCH for Diabetes in Youth Study, and currently serves as chair of the ADA Scientific Planning Committee. Her scholarship has substantial practical importance, ultimately aimed at reducing the epidemic of obesity and diabetes in the U.S. and worldwide.

Stephen Gedney, Ph.D., Don and Karen White Professor of Electrical Engineering, CU Denver.

Gedney is a world-renowned electrical engineer who has made pioneering contributions to the research and teaching of computational electromagnetics. Not only has he created several very important theory and algorithms in the field, he also has translated these to a real-world impact. These impacts are now foundational elements of most commercial scientific and engineering software used by engineers and scientists around the world using applications from wireless communication to stealth technology. His research also has been used to design a variety of products used for national security. He joined CU in 2014 and has served as chair of Electrical Engineering and interim dean of the college. His leadership in curricular, programmatic and personnel engineers has transformed the department into one that functions at the highest level of teaching, research and service. He is an excellent teacher and graduate mentor, impacting the lives of students at all ages. He also led the creation of the Central Denver FIST Lego Robotics tournament for elementary and middle school students held at CU Denver. His career can be described as one of immense institutional, professional and personal impact.

Mary Guy, Ph.D., School of Public Affairs, CU Denver.

Guy is an internationally known public administration scholar whose work has significantly impacted public administration’s scholarship and practice. A CU faculty member since 2008, she is a respected leader who pioneered the subject of emotional labor in public service, and has proven an excellent mentor. She excels at teaching, guiding numerous doctoral students toward tenure-track jobs while also holding five Best Book Awards. She has received the field’s most prestigious national awards for research and her scholarship has advanced enduring debates in the field, particularly around social equity. Guy received the CU Denver campus-wide Award for Excellence in Leadership and Service in 2015 and CU Denver’s Doctoral Student Mentoring Award in 2017. Guy is a fellow in the National Academy of Public Administration, a congressionally chartered organization, and is often asked to chair high-profile national functions. Her research, teaching, leadership and mentorship have been massively impactful in her field throughout her career.

José-Luis Jimenez, Ph.D., Chemistry, CU Boulder.

Jimenez is an exceptional teacher, researcher and community member. A member of the CU faculty since 2002, he is an internationally recognized researcher in the field of atmospheric aerosols, which have significant effects on climate, air pollution and human health. His work has included developing instruments, leading international field missions and conducting innovative analysis, dramatically changing atmospheric chemistry for the better. Not only has he proven a successful and innovative researcher, his influence extends to his students. Many of Jimenez’s most-cited works are lead-authored by his Ph.D. students, demonstrating his willingness to empower the next leaders in his field. Throughout the pandemic, Jimenez applied his aerosol expertise to understanding COVID-19 transmission. Among the results of his collaborative work is the World Health Organization’s acknowledgment that the virus is transmitted by aerosols. His work has not only inspired future researchers, significantly impacted the field of atmospheric aerosols, and proved an impactful, service-oriented member of the CU community, but it also saved lives.

Ruth Ellen Kocher, Ph.D., English, CU Boulder.

Kocher is widely acknowledged as a central voice in Black poetics and has been a pioneer in that field. She has inspired many young poets, and trailblazed paths for Black female poets to follow. A member of the CU faculty since
2006, her dedication to CU is evident in her service in roles such as Director of the Creative Writing Program, then Department Chair, and then Divisional Dean, in addition to making lasting, impactful changes in each position. Kocher’s teaching is exemplary and is heralded as among the best in the department. As an award-winning poet, she has powerfully and creatively brought to the fore important topics such as social justice, race and anti-racism. She has authored seven volumes of poetry, with more on the way, and her poetry has appeared in 13 major anthologies. Kocher displays talent, professionalism and leadership at every level. In addition to writing poetry, she is a multimedia artist with works in film and performance. She has 12 essays in print, demonstrating her inter-arts pursuits even as she pushes boundaries within poetry. She is the winner of countless awards and recognitions, including the Beaux Boudreaux Visiting Writer Series Award from the University of Southern California (2020) and was a recipient of the National Endowment for the Arts Fellowship (2016). Her work as a teacher is exemplary, with unanimous praise from peers and students alike, who talk of her work as inspiring, impactful, and allowing them to command their own artistic crafts.

Diane McKnight, Ph.D., Institute for Arctic and Alpine Research (INSTAAR) and College of Engineering and Applied Sciences, CU Boulder.

A member of the CU faculty since 1996, McKnight has served the CU community in a number of departments including the Department of Civil, Environmental and Architectural Engineering; the Environmental Studies Program, INSTAAR; the Center for Water, Earth Science and Technology; Hydrologic Sciences Graduate Program; and the Mountain Research Station. Her scholarly work explores ecological, biogeochemical and hydrologic processes in lakes, streams and watersheds, primarily in polar and mountain regions. These field studies analyze the dynamics of these systems and apply innovative measurement tools in harsh environments. She is a leader in measuring dissolved organic matter from the spectra of its fluorescence. Her top paper has been cited over 2,000 times. Her work has made her a leader in the National Science Foundation’s Long-Term Ecological Research Network, and she has served as a Principal Investigator in a number of projects since 1997. McKnight’s work has transformed her field and has enhanced scientific understanding to the effects of climate change. She has been active in public outreach programs meant to translate science to the public, including her work on a children’s book series. An outstanding teacher and mentor of graduate students, she has served CU as a curriculum innovator in a wide variety of disciplines. Since 1996, McKnight has been the principal adviser to 24 Ph.D. students. Not only has she led groundbreaking research, furthered public knowledge and served the CU community, she has prepared the next group of researchers to do the same.

Gifford Miller, Ph.D., Department of Geological Sciences and the Institute of Arctic and Alpine Research (INSTAAR), CU Boulder.

Miller is an internationally renowned authority on Quaternary science, the study of the Quaternary period (commonly known as the ice age, and modern warm times) that began approximately 2.6 million years ago. Specifically, he has tackled important questions regarding paleoclimate in the period and his work has transformed our understanding of why significant flora and fauna changes occurred during the period. A member of the CU faculty since 1980, Miller has a golden touch for finding and choosing important problems to study and is equally legendary for solving problems using unconventional approaches. Two important questions he answered are: During the Quaternary period, how big was the arctic ice sheet? And how fast did it change? These answers, as well as several separate investigations regarding megafauna extinctions, have had drastic practical impacts on his field. As a teacher, Miller has succeeded through his students and mentees. Going beyond the classroom, he has garnered a reputation for teaching in the field, bringing students and trainees all across the globe to demonstrate the proper application of analytical tools and data analysis in some of the harshest environments on earth. Miller has served the university in a variety of positions. As chair and then faculty member of Geological Sciences, he was instrumental in the establishment of the Benson Earth Sciences Building. He also was pivotal in the design and development of the SEEC and SEEL buildings on the CU Boulder East Campus. Miller has a demonstrated record of leadership, service and innovation, and is a thought leader in his field.

Helen Norton, J.D., Colorado School of Law, CU Boulder.
Norton is a groundbreaking constitutional scholar who has proven a thought leader in areas of the relationship between the government’s speech and the First Amendment. She was among the first to understand the complexities of this relationship, and published the seminal book on this topic, “The Government’s Speech and the Constitution” (2019). As the most influential and respectful writer on what many considered the most important aspect of legal doctrine in a crucial part of the Constitution, Norton has demonstrated excellence in her field that is unparalleled. Beyond her seminal writings, her teaching contributions have reflected that same level of dedication and inspiration. A member of the CU faculty since 2007, Norton has received several teaching awards, including the President’s Teaching Scholar (2014), and is a five-time recipient of the Excellence in Teaching Award, an honor bestowed by CU law students. Her impact on the education of law reverberates well beyond CU, as her work on government speech has impacted many law schools domestically and internationally. In her 20 years in academia, Norton has published more than 35 full-length law review articles and essays, in addition to a variety of shorter works. She is a highly sought speaker at top constitutional workshops and conferences across the nation.

Judith Regensteiner, Ph.D., School of Medicine and Center for Women’s Health Research, CU Anschutz Medical Campus.

A member of the CU faculty since 1986, Regensteiner now holds a tenured professorship, an endowed chair, and the directorship of the Ludeman Family Center for Women’s Health Research, which she co-founded. She is a leading figure in the fields of peripheral artery disease, cardiovascular consequences of Type 2 diabetes, and women’s health and sex differences. Her areas of focus have been characterized by numerous practical accomplishments in vascular medicine research, in which she has 67 publications; cardiovascular consequences of Type 2 diabetes, in which she has over 80 publications; and 22 publications in sex differences and women’s health research. As a teacher, she has shown devotion to curriculum development, including the Ludeman Family Center for Women’s Health Research’s curriculum for training in academic skills, career development skills and methods to study women’s health and sex differences. She has been a superb mentor, having served as the primary or co-primary mentor for 22 junior faculty and postdoctoral fellows in the last five years. Regensteiner has demonstrated leadership in key positions in her field, including director of Women in Medicine and Science for the School of Medicine; principal investigator for the National Institutes of Health’s (NIH) K-12 Building Interdisciplinary Research Careers in Women’s Health award; principal investigator for the Doris Duke Fund to Retain Clinical Scientists; co-principal investigator for an NIH R01 grant on the Role of Microvascular insulin resistance and cardiorespiratory fitness in diabetes; and core director-career enhancement core, NIH Specialized Centers of Research Excellence (SCORE) on Sex Differences. Regensteiner is an accomplished scholar, director and mentor who has pioneered the field of women’s health issues and brought CU Anschutz to the forefront of these issues.

David A. Schwartz, M.D., Medicine and Immunology, CU Anschutz Medical Campus.

Schwartz has achieved an international reputation for seminal research accomplishments and has served the university both in positions of leadership and as a mentor. His work is groundbreaking and inventive, and as chair of the Department of Medicine at CU Anschutz he has helped lead the department to continual growth and development. His research examines the relationship between environmental exposures, genetic and epigenetic factors, and the development/expression of disease. His lab has had numerous groundbreaking achievements, including being the first to clone the human TLR4 gene and discovering a variation of the gene that is associated with a diminished response to lipopolysaccharide. He also has discovered that environmentally induced changes in DNA methylation and consequent changes in gene expression can direct the maturation of T lymphocytes toward a Th2 phenotype and result in the development of allergic airway disease. Schwartz is best known for his work on interstitial lung disease, particularly idiopathic pulmonary fibrosis, a progressive fatal disease with minimally effective treatment options. His discoveries have led to the recognition that genetic susceptibility, and specifically MUC5B, is the dominant cause of pulmonary fibrosis and may be a key target in understanding the pathogenesis and treatment of this disease. Schwartz is well-published in highly regarded journals and publications, and has been funded by research awards from the National Institutes of Health, Veterans Administration and the Department of Defense for over 30 years. His work has been cited more than 44,000 times. Schwartz joined CU in 2008 and since 2011 has led a faculty that has grown to more than 1,000 members. During his tenure as chair, the Department of Medicine has more than doubled its clinical activity, increased NIH support by over 60%, doubled funding from the Veterans Administration, developed training and
scholarship programs for investigators and clinician-educators, and engineered a fivefold increase in the diversity of its housestaff. During the COVID pandemic, Schwartz’s leadership provided a steady, reassuring vision that resulted in the delivery of outstanding patient care, groundbreaking science, and consistent training and education. As a devoted mentor, scholar and leader, Schwartz has received many prestigious awards, including election to the American Society for Clinical Investigation and the Association of American Physicians, and the American Thoracic Society (ATS) Lifetime Scientific Achievement Award and the ATS Amberson Lecturer.

It’s unanimous: Board of Regents approves compensation increases[8]

The CU Board of Regents voted unanimously to approve compensation increases for eligible faculty and non-classified university staff at CU Boulder, CU Denver, UCCS and system administration at its Nov. 5 meeting. The action follows previous regent approval of an increased compensation pool for CU Anschutz employees and classified staff systemwide that was effective July 1, 2021.

“We owe a great deal of our success to the fact that our staff and our faculty have shown up every day in very challenging conditions and changing environments to do the work of the university,” Board Chair Jack Kroll said. “They have committed themselves to something greater than themselves, and for that we owe them a great debt of gratitude. This action on compensation is a small piece of what we owe them as far as their service to this great university.”

The compensation increase includes a 3% base-building salary increase and a one-time payment equal to 1% of an employee’s annual salary in effect on Dec. 31, 2021. The increase applies to all eligible faculty and non-classified university staff at CU Boulder, CU Denver, UCCS and system administration, except for those with a performance rating of 2 or below on their most recent performance review.

The 3% base-building salary increase will be effective Jan. 1, 2022; the 1% one-time payment will be included in January 2022 paychecks. To help cover these expenses at the campus level, an ongoing decrease in charges assessed to the campuses for system administration will be implemented.

While enrollment on the campuses is at or above June estimates, it did not reach the threshold required to trigger automatic compensation increases. Despite this, CU leadership felt recognizing employees’ hard work amid rising costs of living was paramount.

“When we didn’t meet our threshold for an automatic compensation increase, we went back to the drawing board,” President Todd Saliman said. “Thank you to the chancellors and the regents for being part of that. Hopefully this (action) helps communicate our appreciation for our outstanding employees.”

Board Vice Chair Sue Sharkey and Regent Callie Rennison both echoed Saliman’s comments. “From the board and from the leadership of this university, I want to acknowledge how much we appreciate the employees of the University of Colorado because they make this university what it is – a great institution,” Sharkey said.

“As a faculty member myself I can speak to how difficult it’s been the last few years,” Rennison said. “I think this goes a long way to show our employees that they’re supported.”

Last week’s board action follows previous regent action that includes a one-time payment equal to a 2% pay increase for faculty and non-classified university staff at CU Boulder, CU Denver, UCCS and system administration for the six months between July 1 and Dec. 31, 2021, which was a result of the shift to the calendar year compensation cycle. It also follows previous salary increases for classified staff universitywide and the CU Anschutz faculty and university staff compensation pool, plus hourly market wage adjustments that brought most campuses up to a minimum of $15 per hour effective on July 1, 2021.
CU Denver, MSU Denver, Community College of Denver – institutions comprising the Auraria Campus – expand displaced Aurarian Scholarship, increasing access to college education[9]

Why invest in a Health Savings Account? It’s literally money in the bank[10]

Net Zero Campus Safety building coming to CU Anschutz[13]

First-gen faculty have advice for first-gen students[14]

Regents honor past service of outstanding CU leaders[15]

The CU Board of Regents on Friday acknowledged university employees who are no longer in their roles. Passing resolutions of appreciation, the board honored two former CU vice presidents, two governance leaders and a provost who is changing positions to work exclusively at CU Anschutz.

The resolution for Vice President Emerita Ken McConnellogue notes that, having been at CU for 15 years serving three presidents, 26 regents and nine chancellors, he put his Irish gift of gab – as well as his CU Boulder journalism degree and reporting experience – to good use.

The former vice president of university communication thanked the regents, noting he has long admired the public service they provide.

“I attended CU Denver when I came to school for a couple of years before transferring up to CU Boulder and earning my degree. It changed my life and improved my life,” McConnellogue said. “And there are hundreds of thousands of people like me. So this work is crucial.”

Vice President Emerita Kathy Nesbitt was recognized for overseeing a broad range of critical services at the university, including payroll, employment policy, compliance education, leadership and organizational development, benefits design, information security and more.
As vice president for administration, she oversaw the CU Health Plan offered through the University of Colorado Health and Welfare Trust, and led numerous upgrades to technical infrastructure.

Nesbitt voiced her gratitude to the university community for its continued support – especially through an extremely difficult 2020.

“I had an employer who respected me and appreciated me, gave me space,” she said “And for that I'm eternally grateful. I appreciate all of you. Although many times our interests were different, I respect all of you. I consider all of you my friends.”

Roderick Nairn had served with distinction as the provost and executive vice chancellor for academic and student affairs for the consolidated University of Colorado Denver | Anschutz Medical Campus since 2008. The regents honored Nairn for his role at CU Denver, having now moved exclusively to CU Anschutz, where he will assume a new position to assist Chancellor Don Elliman in the academic mission of the campus.

“I’m especially appreciative of the many great colleagues that I have had a chance to work with over the years,” Nairn said. “Of course, it’s their work that’s been recognized as well. One of the great things about these positions is you get thanked for things that everybody else helps to get accomplished. I’m especially grateful for the opportunities and challenges that they created that made the time fly by.”

Resolutions for former governance leaders who could not attend also were unanimously approved by the board.

They are:

Former Faculty Council Chair Joanne Addison, who provided consistent, dynamic and action-oriented leadership for the CU Faculty Council from 2018-21. Addison was a strong advocate for diversity, equity and inclusion and for academic freedom for faculty, the resolution stated.

Former Chair of the Intercampus Student Forum Isaiah Chavous, who consistently provided an important voice for CU students for the 2020-21 academic year. The resolution notes that during the ongoing COVID-19 crisis, he continued to represent students' interests and to advocate for their needs.

The resolutions are posted with the board's meeting minutes.

Saunders named NAADAC's Addiction Educator of the Year

MacLennan named associate vice chancellor of enrollment management
